SAM[®] Splint

SHAPE. SET. SECURE.

UNIVERSAL FLEXIBILITY

Touting unrivaled flexibility, SAM[®] Splint bends into any simple curve, becoming exponentially stronger and more supportive. SAM[®] Splint is globally acclaimed by emergency care providers, outdoor enthusiasts, the U.S. military, and even NASA.

FEATURED TECHNOLOGY

ADAPTABLE C-CURVE™ PRINCIPLE

SAM[®] Splint leverages the revolutionary C-Curve™ Principle to mold its foam and aluminum layers into structural arcs, strong enough for pre- or post-cast care, while remaining lighter and more transportable than traditional splints that rely on heavy, rigid materials. Bend it back into its original form to stow away or remold for a separate injury.

ENGINEERED FOR VERSATILE SUPPORT

1 CUT-TO-SIZE

SAM[®] Splint's two layers of closed-cell foam and its aluminum interior can be cut with ordinary scissors to adapt to any size requirements.¹

2 MOLDABLE ALUMINUM

Flat, O-temper aluminum inside the splint's outer layers molds easily, allowing for a wide spectrum of applications.

3 CLEANABLE EXTERIOR

Exterior closed-pore foam can be cleaned and disinfected with bleach and water for reuse.²

4 RADIOLUCENT MATERIAL

Medical professionals are able to take X-rays and CT-scans without removing the splint from the fractured or injured limb.

5 WEATHER RESISTANT

Designed to function across the spectrum of global temperatures – from the Sahara to Mt. Everest.

6 LIGHTWEIGHT DESIGN

Substantially lighter than plaster or fiberglass splints, SAM[®] Splint requires only a wrap or tape to secure an injured bone or stabilize a joint.

¹ Do not use a serrated blade. Ensure there are no sharp edges after cutting, and cover with tape.
