

DEAD ON TOOLS 2015

Who Uses Dead On® Gear:

Skully says, "The idea at Dead On® Tools is that serious tools can be fun."

The Dead On® brand reflects the collision of serious tool using professionals and a lifestyle lived out loud, with an added dose of rebel yell. Dead On® tool users don't check their personality when they punch the clock. We design products that match that lifestyle, and stand out in a category filled with commodity products. The Dead On® name and distinctive skull logo are about to become icons for those end users.

PRO STEEL HAMMER

Model No: DOS22M & DOS22S

Specifications	DOS22M	DOS22S
Face	Milled	Smooth
Head Weight	22 oz.	22 oz.

HAMMER**

Magnetic
nail set

Diamond pattern
rubber grip

What is Investment Casting?

Skully says, "This sucker hits a ton." A rocket scientist would tell you that the head is an S-7 investment cast. S-7 tool steel is harder and tougher than 1060 steel, and investment casting guarantees a precision balance.

Dead On®

21 OZ. INVESTMENT CAST HAMMER

Model No:

Exhumers

Skully says, "Dig it up."

*Buried the nail in the wrong board?
No problem, just dig it up with the Dead On® Exhumer.*

*Lose your circular saw wrench?
No problem, the Exhumer's got one built right in.*

*Need a drink?
We can't help you there, but if you find a bottle,
the Exhumer also comes with a handy bottle opener.*

Cordura® Ballistic Fabric

Skully says, "Go ballistic or go home!"
This is the best material in the world
and professionals won't settle for less.

- Ballistic nylon was originally developed by Dupont as a protective material in flak jackets worn by WW2 airmen.
- Technical 6.6 polymer nylon is the key to that outstanding strength.
- Signature 2x2 basket weave provides extra durability as compared to 1x1 weaves typical on most fabrics. What gives ballistic its trademark look is not only the 2x2 weave, but the interlocked basket weave pattern.

GEL Dome Soft Series Non-Marring Kneepads

Skully says, "Ain't nothing soft about me".

- *Well, true that, but flooring installers often require soft kneepad caps that will not mar or scratch the work surface. These caps are made with Thermoplastic Rubber (TPR), and also provide slip resistance, making them ideal for roofers.*
- *Typical Applications:
Working on tile or hardwood floors, or roofing.*

GEL DOME Technology

What we refer to as "gel" in kneepads is actually a thermoplastic elastomer (TPE). To qualify as a TPE, a material must be:

- *Able to stretch to moderate lengths and return to its original shape.*
- *Offer high resistance to "creep", the technical term for how a solid material reacts to repeated mechanical stress, such as a kneepad being compressed in the same area.*

These characteristics are what make gel a higher performance material than the usual foam in most kneepads.

NON-MARRING KNEE PADS

GEL FLEXIBLE

Model No: HDP223155

Accordion flex movement

Washable (ideal for concrete)

GEL ELIMINATOR

Model No: HD99000

Non-mar, non-slip cap will not mar floors

Extended top strap eliminates binding behind knee

GEL ALL TERRAIN

Model No: HD95000

4 point raised suspension cap suspends knee inside

Top and bottom Velcro® closure

GEL Dome Hard Series Swivel/Slider Kneepads

Skully says, "Strap me in, and don't crowd me . . . I got moves".

- *When working on carpet or subfloor, and you need to swivel and slide around to do the job, select a GelDome Kneepad made with an HDPE plastic cap. These are made with hard caps that allow for plenty of movement, and offer maximum protection.*
- *Typical Applications:
Working on carpet, subfloor, concrete, metal. Also offers maximum protection to the knee in general use.*

GEL DOME Technology

What we refer to as "gel" in kneepads is actually a thermoplastic elastomer (TPE). To qualify as a TPE, a material must be:

- *Able to stretch to moderate lengths and return to its original shape.*
- *Offer high resistance to "creep", the technical term for how a solid material reacts to repeated mechanical stress, such as a kneepad being compressed in the same area.*

These characteristics are what make gel a higher performance material than the usual foam in most kneepads.
