

SAFEWAZE

Rebar Positioning Assembly Instructions

WARNING

This product is part of a personal fall arrest system to be used for work positioning. The manufacturer's instructions must be provided to users of this equipment. The user must follow the manufacturer's instructions for each component of the system. The user must read and understand these instructions before using this equipment. Manufacturer's instructions must be followed for proper use and maintenance of this equipment. Alterations to this product, misuse of this product, or failure to follow instructions may result in serious injury or death.

IMPORTANT

Questions regarding the use, care, or suitability of this equipment for your application? Contact Safewaze.

IMPORTANT

Record identification information before using this product. Identification information may be found on the equipment label. This information should be recorded in the "Inspection Log" located at the back of this manual.

ANSI Z359.1

This manual is intended to meet the manufacturer's instructions as required by ANSI Z359 and should be used as part of an employee training program as required by OSHA.

User Information

Date of First Use: _____

Serial#: _____

Trainer: _____

User: _____

Do not throw away these instructions!

Read and understand these instructions before using equipment!

INTRODUCTION

Thank you for purchasing an Safewaze Rebar Positioning Assembly. This manual must be read and understood in its entirety, and used as part of an employee training program as required by OSHA or any applicable state agency.

This manual and any other instructional material must be available to the user of the equipment. The user must read and understand these instructions or have them explained to them before using this equipment. The user must read and follow the manufacturer's instructions for each component or part of the complete system. Manufacturer's instructions must be followed for proper use and maintenance of this product. Alterations or misuse of this product, or failure to follow instructions may result in serious injury or death.

APPLICABLE SAFETY STANDARDS

When used according to instructions, connectors included in this manual meet all applicable ANSI Z359.1 standards and OSHA regulations for fall protection. Applicable standards and regulations depend on the type of work being done, and may include state-specific regulations. Refer to local, state, and federal (OSHA) requirements for additional information concerning the governing of occupational safety regarding Personal Fall Arrest Systems (PFAS).

WORKER CLASSIFICATIONS

Understand the definitions of those who work in proximity of or may be exposed to fall hazards.

Qualified Person: "Qualified" means one who, by possession of a recognized degree, certificate, or professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated his ability to solve or resolve problems relating to the subject matter, the work, or the project.

Competent Person: "Competent person" means one who is capable of identifying existing and predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.

Authorized Person: "Authorized person" means a person approved or assigned by the employer to perform a specific type of duty or duties or to be at a specific location or locations at the job site.

It is the responsibility of a Qualified or Competent person to supervise the job site and ensure safety regulations are complied with.

PRODUCT SPECIFIC APPLICATIONS

Purpose: Safewaze Rebar Positioning assemblies are designed to be used as part of a Personal Fall Arrest System (PFAS) for work positioning.

- A competent person shall train users on this equipment in accordance with OSHA and ANSI.
- Never exceed a free fall distance of 6 ft. A free fall of more than 6 ft could cause excessive arrest forces that could result in serious injury or death.
- All Safewaze Rebar Positioning Assemblies have a maximum capacity of 420 lbs including any tools, clothing, accessories, etc., unless otherwise rated by Safewaze.
- Anchorages for attachment of Safewaze Rebar Positioning Assemblies shall support a minimum of 5,000 lbs or be designed with a safety factor of two by a Qualified Person.
- All Safewaze Rebar Positioning Assemblies must IMMEDIATELY be removed from service if subjected to fall arrest forces.
- Safewaze Rebar Positioning Assemblies shall be inspected by the end user prior to each usage and by a Competent Person other than the user at least annually. These annual inspections shall be documented.
- Safewaze Rebar Positioning Assemblies are designed to be used as or connectors for work positioning. THEY ARE NOT TO BE USED FOR MATERIAL HANDLING

LIMITATIONS

Fall Clearance: There must be sufficient clearance below the anchorage connector to arrest a fall before the user strikes the ground or an obstruction. When calculating fall clearance, account for a MINIMUM 2' safety factor, deceleration distance, user height, length of lanyard/SRL, and all other applicable factors. (See Figure 1)

Swing Falls: Prior to installation or use, make considerations for eliminating or minimizing all swing fall hazards. Swing falls occur when the anchor is not directly above the location where a fall occurs. Always work as close to in line with the anchor point as possible. Swing falls significantly increase the likelihood of serious injury or death in the event of a fall. (See Figure 2)

FIGURE 2

COMPATIBILITY OF CONNECTORS

Connectors are compatible with connecting elements when they have been designed to work together in such a way that their sizes and shapes do not cause their gate mechanisms to inadvertently open regardless of how they become oriented. Connectors (hooks, carabiners, and D-rings) must be capable of supporting at least 5,000 lbs. (22.2 kN). Connectors must be compatible with the anchorage or other system components (see Figure 4). Do not use equipment that is not compatible. Non-compatible connectors may unintentionally disengage (see Figure 3). Connectors must be compatible in size, shape, and strength. Self-locking snap hooks and carabiners are required by ANSI Z359 and OSHA guidelines. Contact Safewaze if you have any questions about compatibility.

NOTE: SOME SPECIALTY CONNECTORS HAVE ADDITIONAL REQUIREMENTS. CONTACT Safewaze WITH QUESTIONS.

FIGURE 3 - UNINTENTIONAL DISENGAGEMENT

Using a connector that is undersized or irregular in shape (1) to connect a snap hook or carabiner could allow the connector to force open the gate of the snap hook or carabiner. When force is applied, the gate of the hook or carabiner presses against the non-compliant part (2) and forces open the gate (3). This allows the snap hook or carabiner to disengage (4) from the connection point.

COMPATIBILITY

Safewaze Rebar Positioning Assembly must be connected to a compatible connection (i.e. compatible D-ring). Failure to do so could cause disengagement (roll-out), or damage to the connector. Self locking connectors reduce, but cannot eliminate, the possibility of roll-out.

CAPACITY

Safewaze Rebar Positioning Assemblies are designed for use by persons with a combined weight weight (person, clothing, tools, etc.) of no more than 420 lbs. Only one personal protective system may be connected to the connectors/ anchorage connectors at any time.

CONNECTION

Snap Hooks: Safewaze Snap Hooks/Rebar Hooks are self closing/self locking connectors. The snap hooks provide an eye for permanent attachment of a lifeline or lanyard.

Carabiners: Safewaze self locking Carabiners are self closing/self locking connectors. Some versions include a pin that may be used to retain or isolate a connected lanyard or lifeline.

Personal fall arrest systems used with Safewaze connectors must be rigged/installed in such a manner as to limit free fall as per ANSI / OSHA requirements.

MAKING CONNECTIONS

Safewaze Snap hooks and carabiners are self closing/self locking. Ensure all connections are compatible in size, shape and strength. Do not use equipment that is not compatible. Ensure all connectors are fully closed and locked.

Safewaze connectors (snap hooks and carabiners) are designed to be used only as specified in each product's user's instructions. See figure 4 for examples of inappropriate connections. Do not connect snap hooks and carabiners:

- To a D-ring to which another connector is attached.
- In a manner that would result in a load on the gate (with the exception of tie back hooks). NOTE: Large snap hooks must not be connected to objects which will result in a load on the gate if the hook twists or rotates.

NOTE: Large throat snap hooks must not be connected to standard size D-rings or similar objects which will result in a load on the gate if the hook or D-ring twists or rotates, unless the snap hook complies with ANSI Z359.1-2007 or ANSI Z359.12 and is equipped with a 3,600 lb (16 kN) gate. Safewaze Connectors are tested to Z359.12 specifications and meet the requirements regarding gate ratings of 3,600 lbs. to include side load testing. Check the marking on your snap hook to verify that it is appropriate for your application.

- In a false engagement, where features that protrude from the snap hook or carabiner catch on the anchor, and without visual confirmation seems to be fully engaged to the anchor point.
- To each other.
- To any object which is shaped or sized in a way that the snap hook or carabiner will not close and lock, or that roll-out could occur.
- In a manner that does not allow the connector to align properly while under load.

FIGURE 4 - INAPPROPRIATE CONNECTIONS

PHYSICAL AND ENVIRONMENTAL HAZARDS

Use of Safewaze Rebar Positioning Assemblies in areas with physical or environmental hazards may require additional precautions to reduce the possibility of injury to the user or damage to the equipment. These hazards may include, (not limited to): heat, severe cold, chemicals, corrosive environments, high voltage, power lines, gases, moving machinery, and sharp edges.

CORROSION

Use of Safewaze Rebar Positioning Assemblies near seawater or other corrosive environments will require DAILY cleaning in order to ensure corrosion damage is not affecting the performance of the assembly.

CHEMICAL HAZARDS

Use of Safewaze Rebar Positioning Assemblies in the vicinity of solutions containing acid or caustic chemicals, especially at elevated temperatures, may cause damage to connectors. Increased cleaning and inspection of assemblies is recommended.

ELECTRICAL HAZARDS

Do not install Safewaze Rebar Positioning Assemblies where they, or the user, may come into contact with electrical power lines.

TRAINING

Safewaze Rebar Positioning Assemblies are intended to be installed and used by persons who have been properly trained (as per ANSI / OSHA) in their correct application and use.

OPERATION AND USE

WARNING: Do not alter or intentionally misuse this equipment. Some subsystems and component combinations may interfere with the operation of this equipment.

WARNING: Consult with your doctor prior to use of this equipment if there is reason to doubt your fitness to safely absorb fall arrest forces in the event of a fall.

REBAR POSITIONING ASSEMBLY CONFIGURATIONS

OPERATION AND USAGE

Work Positioning: Safewaze Rebar Positioning Assemblies are authorized for use in Work Positioning applications. Work Positioning allows a worker to be supported during suspension while freeing both hands to conduct work operations. The structure to which the connector is attached must withstand loads applied in the directions permitted by the system of at least 3,000 lbs. Maximum allowable free fall is 2'. For positioning applications, the allowable attachment points to harness are the Side D-rings.

FIGURE 5 - HARNESS ATTACHMENT

FIGURE 6 - ATTACHMENT TO REBAR CAGE

BEFORE EACH USE of this equipment, carefully inspect it to assure it is in good working condition. Check for worn or damaged parts. Inspect for sharp edges, burrs, cracks, distortion, or corrosion. Gates must close and lock. Inspect other fall arrest or restraint equipment according to manufacturers instructions. Do not use if inspection reveals an unsafe condition.

PLAN your fall arrest system before starting your work. Consider all factors affectin your safety during use.

After inspection of the Rebar Positioning Assembly and all other components of the users Personal Fall Arrest System (PFAS), the user can move themselves to the their desired work location. Prior to this movement the user must ensure that their primary fall protection device, i.e., Self Retracting Lanyard, Energy Absorbing Lanyard, etc.. is correctly attached to the their anchorage point and the Dorsal D-ring of their Full Body Harness.

Once the worker has reached their desired work location on the Vertical Rebar, the user, after ensuring that the snap hooks of the Rebar Positioning Assembly are security attached the side positioning D-rings of their full body harness(See Figure 5), can attach to the Vertical Rebar via the rebar hook of the Rebar Positioning Assembly . The user should choose a location on the Vertical Rebar where both vertical and horizontal rebar are captured within the rebar hook (See Figure 6).

Upon ensuring that all connection points of the the Rebar Positioning Assembly are securely attached, the user then has the ability to free their hands in order to begin their work operations(See Figure 7).

Once the user has completed their work or have the need to move along the Vertical Rebar to another work location, the user should again grasp the rebar cage with one hand while leaning forward to create some slack in the chain or web of the Rebar Positioning Assembly. The user can then detach the rebar hook from the Vertical Rebar and "Park" the rebar hook on one of the lanyard keepers of their full body harness, or attach and re-attach the rebar hook as they move along the Vertical Rebar. Upon reaching their next work location the user will repeat the steps to secure the Rebar Positioning Assembly to the Vertical Rebar and once again continue their work.

FIGURE 7 - PROPER USAGE WHEN POSITIONING ON VERTICAL REBAR

SHARP EDGES

Avoid working where the connecting subsystem or other system components may come in contact with unprotected sharp or abrasive edges. If working near sharp edges is unavoidable, protection against cutting must be used.

RESCUE

When using this equipment, a rescue plan must be in place as well a means to implement it and communicate that plan to users, authorized persons, and rescuers.

AFTER A FALL

Any equipment which has been subjected to the forces of arresting a fall must be removed from service immediately and destroyed.

WARNING: Follow the manufacturer's instructions for associated equipment (full body harness, lanyard, lifeline etc.) used in your personal all arrest system.

TRAINING

It is the responsibility of the users of this equipment to understand these instructions and to be trained in the correct installation, use, and maintenance of this equipment (as per ANSI, OSHA, and applicable state, provincial and federal requirements.) This user manual is not a substitute for a comprehensive training program. Training must be provided on a periodic basis (as per ANSI, OSHA, and applicable state, provincial and federal requirements) to ensure proficiency of the users.

INSPECTION

FREQUENCY:

- Before each use, visually inspect according to the steps listed below.

- The Safewaze Rebar Positioning assembly must be inspected by a competent person (as defined by ANSI, OSHA, guidelines), other than the user, at least annually. Record results of each formal inspection in the inspection log at the back of this manual.

IMPORTANT: If this equipment has been subjected to a fall arrest or impact forces, it must be immediately removed from service and destroyed.

INSPECTION STEPS:

STEP 1: Inspect the Safewaze Rebar Positioning Assembly for damage. Pay particular attention for cracks, sharp edges, burrs, dents, or deformities. Check for bending or distortion.

STEP 2: Inspect the Safewaze Rebar Positioning Assembly for excessive corrosion. The gate and lock should operate smoothly, with no difficulty. Gates must fully close and engage nose of hook.

STEP 3: Inspect markings and labels. Markings and labels should be present and fully legible.

STEP 4: Inspect each system component or subsystem according to manufacturer's instructions.

STEP 5: Record the inspection date and results in the inspection log.

*** If the inspection reveals a defective condition, remove the unit from service and destroy.

MAINTENANCE & SERVICING

If gate operation of any hook of the Rebar Positioning Assembly is sluggish, apply small amount of WD-40 or similar moisture repellent lubricating agent to the hinge end of the hook gate ONLY. Remove excess with a clean, dry cloth. If hook still does not function properly, remove from service and destroy.

WARRANTY

Safewaze warrants its products are free from defects in materials and construction under normal use and service. Liability is not accepted for abuse, modification, improper use, destructive activity and contaminated exposure.
